

CSS Beginner Assignment (Inspired by Kevin Powell)

Objective: Build a responsive landing page for a fictional productivity app called FocusFlow.

Skills to Practice

- CSS selectors
- Box model
- Typography
- Colors and CSS variables
- Flexbox
- Responsive design with media queries
- Hover and focus states
- CSS organization

Page Requirements

1. Navigation Bar

Create a navigation bar containing:

- Logo text: FocusFlow
- Links: Features, Pricing, Contact
- A Get Started button

Requirements:

- Use Flexbox for alignment.
- Add hover effects on links and button.

2. Hero Section

Include:

- Large heading
- Short description
- Primary button
- Secondary button
- Illustration placeholder (colored box)

Requirements:

- Use Flexbox.
- Stack vertically on mobile screens.

3. Features Section

Create three feature cards:

- Time Tracking
- Smart Goals
- Team Collaboration

Each card should contain:

- Icon placeholder
- Title
- Description

Requirements:

- Use CSS Grid.
- Add border radius, shadow, and hover animation.

4. Testimonials Section

Add two testimonials and practice spacing and typography.

5. Footer

Include copyright information and social links.

Styling Requirements

Use CSS variables for colors and spacing.

Create a mobile breakpoint at 768px.

Ensure navigation, hero, and feature sections adapt to smaller screens.

Accessibility Bonus

- Use semantic HTML elements.
- Add visible focus states for keyboard users.

Stretch Goals

1. Add CSS transitions.
2. Create a dark mode using CSS variables.
3. Add a hero background gradient.
4. Use clamp() for responsive typography.
5. Add a mobile hamburger menu.

Expected Learning Outcomes

- Semantic HTML
- Flexbox and Grid layouts
- CSS custom properties
- Consistent spacing systems
- Mobile-first design
- Accessibility fundamentals
