

FocusFlow Landing Page Challenge

A beginner CSS project inspired by modern responsive design practices.

Project Brief

Build a responsive landing page for a fictional productivity application called **FocusFlow**. Your goal is to recreate the wireframes below using semantic HTML and CSS only.

Design System

Use CSS variables for colors, spacing, and typography. Follow a mobile-first approach and ensure the layout adapts smoothly to smaller screens.

Wireframe 1: Hero Section

Replicate this layout using Flexbox.

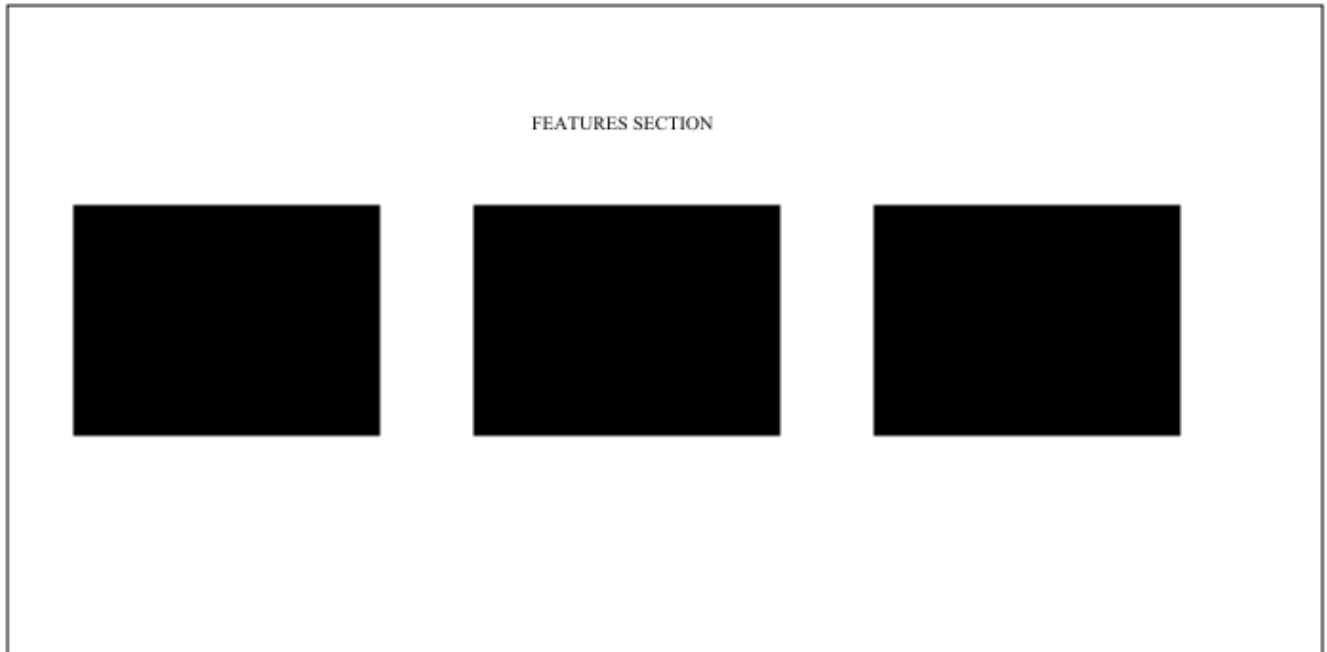

Requirements

- Navigation with logo, links, and CTA button
- Hero content with heading, text, and two buttons
- Illustration placeholder on the right
- Collapse into a single column on mobile

Wireframe 2: Features Section

Replicate this layout using CSS Grid.

Requirements

- Three feature cards
- Border radius and shadows
- Hover interaction
- Single-column layout on mobile

Full Assignment Requirements

Sections to build:

1. Navigation Bar
2. Hero Section
3. Features Section
4. Testimonials Section
5. Footer

Technical Requirements

- Flexbox and Grid
- CSS Variables
- Responsive Design (768px breakpoint)
- Accessibility focus states
- Semantic HTML

Stretch Goals

- Dark mode
- clamp() typography
- CSS transitions
- Background gradients
- Mobile navigation menu

Deliverables

Submit index.html and styles.css along with screenshots of desktop and mobile versions.
